How to Fish Electrical Cables

Lacking X-ray vision, you can't know exactly what's behind your home's walls or above its ceilings. That's why fishing an electrical cable to a new outlet or switch, like any fishing expedition, takes time, patience and a certain amount of trial and error.

But, given the standard spacing of studs and joists typically, 16 or 24 inches on center there's a good chance you can predict where the obstructions will be. You can also use a stud finder to locate framing you can't see. Thus, with patience and a little luck, you can extend cable from an existing power source to virtually any new location, without chopping a
